- II. Fast turnaround time- within 24 hours *
- III. Customer satisfaction
- IV. Affordable cost
- V. Highest degree of accuracy
- VI. Sample Pickup facility

Connect to About Us

Welcome

Goodness Lab : A Accredited Lab

Your trusted partner for material testing

About us Writeup Small part comes here

Lab services

1. Mechanical testing
2. Chemical Testing
3. Microstructure & Metallography
4. Corrosion Testing
5. Failure Analysis

Testimonials from Our Clients

"Reliable, Accurate, and Professional!"

"We've been using **Infinite Engineering Solutions** for all our material testing needs, and we couldn't be happier. The team is knowledgeable, and their testing methods are top-notch. We can always count on them for precise, reliable results. They've helped us streamline our processes and ensure the quality of our products every step of the way."

— Rushikesh Sinare., Director, Infinite Engineering Solutions

"Exceptional Customer Service"

"Not only does **Viraj Industries** provide excellent testing services, but their customer support is second to none. Every time we have a question or need assistance, their team is quick to respond and always goes above and beyond to ensure we are satisfied."

— Mr. Hase, Director, Viraj Industries

"Fast Turnaround, Uncompromised Quality"

"[Company Name] offers a fast turnaround without compromising the quality of their work. The results we receive are always accurate, and their reports are clear and comprehensive. They've been a critical partner in ensuring that our projects are completed on time and to the highest standard."

— Mr. Kadam, Sairaj Engineering Works

About Us

Welcome to Goodness Labtech Solutions LLP, Your Trusted Partner in Metallurgical Material Testing solutions, accredited by NABL

At Goodness Labtech Solutions LLP, Bhosari MIDC, Pune, Maharashtra, we are specialize in providing high-quality, accurate and reliable metallurgical material testing services to support industries that rely on the strength, durability, and performance of metals.

With a focus on both raw materials and finished components, we help manufacturers, researchers, and engineers ensure the highest standards of material quality and performance.

Our state-of-the-art facility is equipped with the latest testing technologies and operated by a team of highly skilled professionals. We are committed to delivering precise, fast, and cost-effective solutions for

all your metallurgical testing needs, ensuring that your materials perform optimally in their intended applications.

Our Quality Policy

You can trust Goodness Lab that our testing processes are backed by our accreditation from NABL (National Accreditation Board for Testing and Calibration Laboratories), A Constituent Board of the Quality Council of India, Government of India, as per ISO 17025:2017.

- ◆ Providing world-class testing services for Mechanical, Metallurgical & Chemical testing.
- ◆ Enhance the competence of the laboratory in these fields.
- ◆ Commitment from all levels of employees towards impartiality, confidentiality for laboratory activities, and validity of testing results.
- ◆ Ensured consistency in all operations of laboratory
- ◆ Strictly follow the applicable statutory & regulatory requirements.
- ◆ Providing Technical support and information for testing.
- ◆ Continually improve the effectiveness of the laboratory management system.

Our effort is to continuously upgrade technologies, machines, and regular training to staff to achieve continuous improvement of quality

Lab Services

6. Mechanical testing
7. Chemical Testing
8. Microstructure & Metallography
9. Corrosion Testing
10. Failure Analysis

CORE SERVICE OFFERINGS

Mechanical and Physical Testing

Goodness Lab has a comprehensive range of Mechanical Testing services for metallic material.

TECHNICAL CAPABILITY (test will come with photo)

Universal Testing Machines

1. FIE MAKE -Universal Testing Machine (UTM) of 400 KN capacity with Electronic Extensometer.

Hardness Testers

1. FIE MAKE Optical Brinell Hardness Testing Machine
2. FIE MAKE Computerized Vickers Hardness Testing Machine
3. FIE MAKE Rockwell Cum Superficial Hardness Testing Machine
4. CHROMA Micro Hardness Testing Machine

Impact Testers

1. FIE MAKE Impact Testing Machine-IT 30

Goodness Lab provides a various range of physical testing services on Metal, weldments, Pipe & Tubes. that include:

- Tensile / Transverse/Compression test
- Tensile Tests at Room Temperature with extensometer
- Tensile test with 0.2% proof stress, stress/strain diagram with electronic extensometer inclusive of sample machining charges
- Yield, UTS and Elongation
- Tensile test for fine wires/foils
- Full section Tensile test for steel bar up to 40 mm diameter
- Ball Test
- Bend test / Reverse bend / Re-bend / Root / Face / side bend test
- Flattening, Flaring, Drift Expansion Tests on Pipes and Tube
- Re- bend test including aging
- Full-size breaking of bolt
- Wedge load test / Head soundness test
- Compression test of springs (up to 3 readings)
- Tensile test for fine wires/foils
- Charpy V notch Impact Test (a) R. T.
- Impact Tests as per ISO and IS Standards Charpy and Izod
- Rockwell Hardness A, B, C including Superficial Scales N, T
- Microhardness 10 gms to 1kg including Case Depth by Micro hardness
- Vickers Hardness tester (Micro/Macro indentation)
- Brinell Hardness tester

- Jominy End Quench Test (with normalizing heat treatment) as per ASTM A255
- Sectional Weight of CTD/TMT/Reinforcement bars
- Surface characteristics of CTD/TMT/Reinforcement bars
- Hydraulic / Pneumatic Test inclusive of Sample Preparation Charges
- Shear Test
- Proof Load / Slip Test on fabricated items such as clamps and assemblies
- Load Test - Proof Load on nuts, Breaking Load, Wedge Load Test on Bolts, Load vs Displacement
- Peel Test
- Residual Stress Measurement
- Tensile test with Youngs Modulus (Modulus of Elasticity)
- Stress Strain Graphs with all relevant data

TENSILE AND BEND TEST

1. Tensile Test

All tests at Goodness Lab are performed in compliance with ASTM E8/E8M, ASTM A370, and IS/BS/ISO Standards.

Information regarding the U.T.S, Yield strength, Elongation, and Reduction in Area obtained from tensile strength. Our equipment is capable of performing 0.1%, 0.2%, 0.5%, and 1% proof tests, as well as Extension Under Load (EUL) testing.

Test can be performed these tests at room temperature, enable us to determine properties such as Young's modules.

2. Bend Test

A bend test is a mechanical test used to determine the ductility, strength, and toughness of a material (usually sheet, strips, plate, bar and wire) In this test, a sample material is subjected to a bending force to observe how it deforms under stress. It helps assess the material's ability to withstand deformation without breaking.

Test carried out such as bend, double bend, Rebend, reverse/alternate bend as per ASTM E290, E190, A370 and other IS, BS, ISO standards)

3. Load Test

This is a method for assessing the ability of a material to withstand compressive loads. such as proof load tests on nuts, breaking load tests, wedge load tests on bolts, and load vs. displacement tests

4. Flattening Test

A **flattening test** is a mechanical assessment used primarily to evaluate the ductility and integrity of tubular products, such as pipes and tubes. Applied for Pipe and Tube as per ASTM A370, IS 2328

5. Flaring Test

The Drift Expansion Test, also known as a Flaring Test, is a method to assess the ductility and formability of metallic tubes and pipe by expanding the inner diameter using a conical mandrel, verifying the tube's ability to undergo plastic deformation without cracking, as per IS 2328

Impact Testing

The impact test (ASTM A370, ASTM E23, ISO 148-1 and IS 1757, IS 1598) is a method for evaluating the toughness and notch sensitivity of metallic materials across a wide range of temperature from ambient to -196°C.

Machine capability ranging from 2 joules to 220 joules.

HARDNESS TESTING

Hardness Testing measures a material's strength by determining resistance to indentation/penetration by material surface.

A. Brinell Hardness Test

All Brinell Hardness tests are complied with ASTM E10, ASTM A370, IS 1500-1, ISO 6506-1 Standard. The Brinell hardness test measures the indentation hardness of materials. The test consists of applying a prescribed load, usually between 500 kg and 3000 kg, for a specified time (10-30 seconds)

B. Vickers Hardness Test (Macro indentation)

At Goodness Lab we conduct Hardness tests as per ASTM E92, ISO 6507-1 and IS 1501-1, BS EN ISO 9015- Standard. Vickers hardness is a way to measure how hard a material is by pressing a diamond pyramid into it and measuring the indentation. Vickers hardness with loads from 30 kg to microhardness loads as low as 10 grams.

C. Rockwell Hardness Test,

At Goodness Lab we conduct Hardness tests as per ASTM E18, ASTM A370, ISO 6508-1 & IS 1586-1 Standard. Rockwell scales A, B, and C (including superficial scales N and T).

D. Vickers (Micro indentation) hardness Test

At Goodness Lab we conduct Hardness tests as per ASTM E384, BS EN 1043-2, ISO 6507-1, ISO 9015-2 & IS 1501-1 Standard. Micro hardness measures the hardness of a material using small indenters, applying significantly lower forces than standard methods.

CORE SERVICE OFFERINGS

Chemical Analysis Lab

Goodness lab has the capability to analyze ferrous and non-ferrous metals in PPM or percentage level.

To identify the elements, a German make Optical Emission Spectrometer is used.

NABL Test Certificates for requests requiring only chemical testing are generally delivered within 1 day.

Chemical Analysis by Spectrometers

Chemical Analysis of Ferrous Metals & Alloys

Carbon Steels, Low Alloy Steels, Stainless Steels, Boron Steels, Tool & Die Steels, Cast Irons and Low Alloy Cast Steels.

- Carbon, Manganese, Silicon, Sulphur, Phosphorus, Chromium, Nickel, Molybdenum, Titanium, Copper, Cobalt, Vanadium, Tungsten, Lead, Aluminium
- Niobium, Tantalum, Zirconium, Nitrogen
- Boron in Boron Steel With Elements in set 1.1.1 Only Boron in Boron Steels

Super alloys , Heat-Resistant, Alloys and Other Special Purpose High Alloy, Steel and Castings. (Total Alloy Content 40 % Or More)

Ferro – Alloys

Chemical Analysis of Non Ferrous Metals & Alloys

Non Ferrous Metals & Alloys : Copper, Zinc, Aluminum, Tin, Lead, Silver Based Materials.

- Copper Based Alloys
- Aluminum Based Alloys
- Purity of Metals (Copper, Zinc, Aluminum, Tin, Lead, Silver)

CORE SERVICE OFFERINGS

Corrosion Detection

Goodness Lab undertakes a wide range of corrosion and stress corrosion tests as per ASTM NACE standards

Intergranular Corrosion (IGC) testing

Inter-granular Corrosion attack in Stainless Steels

- Oxalic Acid Etch test per ASTM A262 Practice A
- Ferric Sulfate-Sulfuric Acid test per ASTM A262 Practice B
- Huey Test, Nitric Acid test per ASTM A262 Practice C
- Copper-Copper Sulfate-Sulfuric Acid test per ASTM A262 Practice E

Inter-granular Corrosion attack in Nickel Rich Chromium Bearing steel

- ASTM G28:2022 (Method A)

Pitting and Crevice Corrosion Resistance of Stainless Steels and Related Alloys

- Ferric Chloride pitting test ASTM G48 method A
- Ferric Chloride crevice test ASTM G48 method B

Detecting Detrimental Intermetallic Phase in Austenitic/Ferritic (Duplex) Stainless Steel

- Ferric Chloride Corrosion test for Classification of Structures of Duplex Stainless Steels per ASTM A923 method C

Salt Spray Corrosion testing

- Salt Spray (Fog) per ASTM B117
- Neutral salt spray (NSS) per ISO 9227

Mercurous Nitrate Test

This test method describes the technique for conducting the mercurous nitrate test for residual stresses in wrought copper alloy mill products.

CORE SERVICE OFFERINGS

Metallurgical Evaluation

Metallography is the study of the microstructure of materials, The metallurgists at Goodness Lab have deep expertise in Metallographic preparation and examination.

Metallographic Tests Performed

- Microstructure Examination
- Macrostructure Examination
- Grain Size determination
- Case depth
- Inclusion rating
- Decarburization Test
- Coating Thickness
- Ferrite by Ferritoscope
- Ferrite by Metallography/Area Fraction (Two Phase Structure)
- Determination of Detrimental Phases in Duplex Stainless steels
- Nodular Count/ Inter metallic phases
- Macro Examination of Forging/Mock up sample

- Macro Examination of Fillet Welded Sample
- Macro Etch Test on Pipe
- Macro Test on Welded Plate
- Welding, Brazing & Fusion Examination

Disclaimer:

Not all tests mentioned on this website are under NABL scope of accreditation. Kindly confirm scope of accreditation for our lab from

Join Our Team

At Goodness Labtech Solutions LLP, we believe that great people make great companies. We are always on the lookout for talented, passionate, and innovative individuals who are eager to grow and make an impact.

Why Work With Us?

- **Dynamic Work Environment** – Collaborate with a team of creative thinkers and problem solvers.
- **Career Growth** – We invest in your professional development with training, mentorship, and advancement opportunities.
- **Inclusive Culture** – Diversity and inclusion are at the heart of our workplace. We celebrate different perspectives and backgrounds.
- **Work-Life Balance** – We offer flexible work arrangements, competitive benefits, and wellness programs to support you.

Opportunities Await

Explore our open positions and take the next step in your career journey. Whether you're a seasoned professional or just starting out, we have a place for you.
